                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC The invention relate to the isolation of genes AAC69084-C69119 encoding CC 27 human secreted proteins AAB37984-38019. The genes can be used to CC generate fusion proteins by linking to the gene for the human CC immunoglobulin G Fc portion (AAC69075) for increasing the stability of CC proteins are useful for preventing, ameliorating or treating medical CC conditions, e.g. by protein or gene therapy. The genes and CC conditions, e.g. by protein or gene therapy. The genes are isolated CC from a range of human tissues disclosed in the specification. The CC nucleic acids, proteins, antibodies and (ant)agonists are useful in CC the diagnosis, treatment and prevention of: (a) cancer, e.g. breast CC and ovarian cancer, and other cancers of the adrenal gland, bone, bone CC marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune CC (b) immune disorders e.g. Addison's disease, allergies, autoimmune CC colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) cund healing; (e) neurological diseases e.g. cerebral anoxia and CC epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.

cc neuroprotectant; anticonvulsant; nootropic; antialzheimers;
cc antiparkinsonian; and vulnerary. The polynucleotides and polypeptides can
cc be used in the prevention, diagnosis and treatment of diseases associated
cc with inappropriate polypeptide expression. Disorders that may be
cc prevented, diagnosed and/or treated by the above methods include immune
cc disorders (e.g. multiple sclerosis, systemic lupus erythematosus and
cc human immuno-deficiency virus (HIV) infections), hyperproliferative
cc disorders (e.g. cancers and Gaucher's disease), cardiovascular diseases
cc (e.g. Scimitar syndrome, Chaga's cardiomyopathy and coronary
cc arteriosclerosis), angiogenic disorders (e.g. corneal graft
cc neovascularisation and diabetic retinopathy), neurological disorders
cc (e.g. Huntington's chorea, Alzheimer's disease and Parkinson's disease),
cu infectious diseases and/or for promoting wound healing, regeneration and
cc vor chemotaxis. AAF33204 to AAF33212 and AAB64881 represent sequences
cc used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                          AAB64991 represent human secreted polypeptide sequences and proteins homologous to them, which are given in the exemplification of the preser invention. Human secreted proteins have activities based on the tissues and cells the genes are expressed in Examples of activities include: immunomodulatory; anti-sclerotic; dermatological; immunosuppressive; anti-flammatory, anti-fly immunostimulant; cytostatic; cardiant; vascular; antimicrobial; anti-angiogenic; ophthalmological;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The polynucleotide sequences given in AAF33213 to AAF33261 encode the human secreted proteins given in AAB64882 to AAB64930.
